Hostile until proven otherwise.

Independent security engineering for defense programs and the companies that support them: offensive testing, cloud and zero trust, authorization and compliance, secure software delivery, detection and response.

CORE COMPETENCIES

01
Offensive security
We break in before someone else does, then prove the fix by trying again.

02
Cloud and zero trust
One stolen credential should not become the whole environment.

03
Authorization and compliance
Packages built from system evidence, not screenshots in a binder.

04
Secure software delivery
The factory that builds the system gets the same scrutiny as the system it ships.

05
Threat detection and response
Detection written for the techniques that matter here, and a team that has rehearsed the bad day.

06
Advisory and enablement
Senior security judgment without a full-time hire.

DIFFERENTIATORS

- **Senior engineer on every task**
  The engineer who scopes the work is the one who does it, from the plan through the retest.
- **Proof, then closure**
  After you fix, I check again. The engagement closes when the fixes hold.
- **Built to DoD guidance**
  Pipelines and containers hardened to the DoD DevSecOps Reference Designs and the DoD Container Hardening Guide.
- **Fixed scope, fixed price**
  Scope, price and dates agreed in writing before work starts. No open-ended hourly billing.
- **Evidence from the system**
  STIGs applied through configuration management and verified on every build, not by hand once a year.
- **US persons, no hidden subs**
  All work is done by US persons located in the United States. No part of the work is subcontracted without your written consent.
